No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BB

```
comprises: (a) an oligo-dT primer and an oligonucleotide complementary
CC the So2 nucleotide sequences defined in the specification, where a primer set
CC the So2 nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprises at polynucleotide which comprises of
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in
CC the specification. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are useful for synthesising polynucleotides,
CC particularly without any specialised methods. AAH03166 to AAH13628 and
CC AAB9593 represent human amino acid sequences; and AAH13629 to AAH13620
CC CAB9593 represent invention.

CC of the present invention.

CC RHD gene deletion in Rh negative haplotypes. The Rhesus genes

CC locus comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the

CC comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the

CC composed preferably the hybrid Rhesus box, the upstream Rhesus box

CC and/or the downstream Rhesus box. The RHD and RHCE genes are located at

CC composed 1 p34.1-p36. Rhesus box flanks the breakpoint region of the

CC RHD deletion in the common RHD negative haplotypes. The sequence has

CC been used to design primers which are useful for: (1) the specific

CC detection of the common RHD positive haplotypes in D-negative

CC individuals; (2) blood group typing; (3) determining whether a patient

CC can be transfused with RhD negative blood and whether blood is suitable

CC for transfusion to patients who should not be exposed to antigen C; (4)

CC assessing the risk of a RhD negative mother of conceiving or carrying an

CC RhD positive foetus. Anti-D antibodies are useful for treating pregnant

CC women who are Rhesus D negative, where the foetus is not homozygous for

CC the RHD gene to treat or prevent haemolytic disease of the newborn.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                486
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           546
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                659
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          719
```

The sequence represents the coding supstream Rhesus box of D positives.

sequence of . The Rhesus

of Rhesus genes

gene

Disclosure; Fig 9; 135pp; English.

nucleic acid molecular structure, positive haplotypes in D-negative

useful for detection of common individuals, comprises RHD, SM

The RHD and RHCE genes are located at CC chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the CC RHD deletion in the common RHD negative haplotypes. The sequence has CC been used to design primers which are useful for: (1) the specific CC individuals; (2) blood group typing; (3) determining whether a patient CC can be transfused with RhD negative blood and whether blood is suitable CC for transfused with RhD negative blood and whether blood is suitable CC assessing the risk of a RhD negative mother of conceiving or carrying an CRhD positive foetus. Anti-D antibodies are useful for treating pregnant CC women who are Rhesus D negative, where the foetus is not homozygous for CC the RHD gene to treat or prevent haemolytic disease of the newborn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В
The sequence represents the coding sequence of Rhesus gene locus:

downstream Rhesus box of D positives. The Rhesus genes locus
comprises the RHD, SMF1 and RHCE (all undefined) genes and/or the
comprises the RHD, SMF1 and RHCE (all undefined) genes and/or the
comprises the RHD, SMF1 and RHCE (all undefined) genes and/or the
comprises the RHD, SMF1 and RHCE (all undefined) genes are located at
comprises the RHD, SMF1 and RHCE genes are located at
chromosome 1 p34.1-p36. Rhesus box. The RHD and RHCE genes are located at
chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the
RHD deletion in the common RHD negative haplotypes. The sequence has
been used to design primers which are useful for: (1) the specific
cheen used to design primers which are useful for: (1) the specific
detection of the common RHD positive haplotypes in D-negative
located the transfused with RhD negative blood and whether blood is suitable
for transfusion to patients who should not be exposed to antigen C; (4)
assessing the risk of a RhD negative mother of conceiving or carrying an
RHD positive foetus. Anti-D antibodies are useful for treating pregnant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5041
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1335

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         멍
                                                                                                The sequence represents the coding sequence of Rhesus gene locus:

Chybrid Rhesus box of RHD negatives. The Rhesus genes locus

comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the

Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box

and/or the downstream Rhesus box. The RHD and RHCE genes are located at

chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the

RHD deletion in the common RHD negative haplotypes. The sequence has

been used to design primers which are useful for: (1) the specific

detection of the common RHD positive haplotypes in D-negative

individuals; (2) blood group typing; (3) determining whether a patient

can be transfused with RhD negative blood and whether blood is suitable

for transfusion to patients who should not be exposed to antigen C; (4)

assessing the risk of a RhD negative mother of conceiving or carrying an

RhD positive foetus. Anti-D antibodies are useful for treating pregnant

women who are Rhesus D negative, where the feetus is not homozygous for

the RHD gene to treat or prayers haemolytic disease of the newborn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rhesus box; RHD positive; sequence length polymorphism; SSP; RHD; RHCE; Rh negative; blood group typing; blood transfusion; antigen haemolytic disease of the newborn; chromosome 1 p34.1-p36; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5041

                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences commber of human reproductive system related antigens. These can be in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence enceprotein of the invention.

CC The secreted proteins and their genes are useful for preventing.

CC treating or ameliorating medical conditions, e.g., by protein or gene

CC therapy. Pathological conditions can be diagnosed by determining the

CC amount of the new protein in a sample or by determining the presence of

CC qualinclude developing products for the diagnosis or treatment of

CC and include developing products for the diagnosis or treatment of

CC and include developing products for the diagnosis or treatment of

CC and include developing products for the diagnosis or treatment of

CC allergies, neurological disorders, diseases of the immune system,

CC AIDS, autoimmune diseases (e.g., reumatoid arthritis), inflammation,

CC allergies, neurological disorders (e.g., Alzheimer's disease,

CC garkinson's disease), cognitive disorders, schizophrenia, asthma,

CC skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis,

CC gastrointestinal disorders, pregnancy-related disorders, endocrine

CC disorders, and infections. The proteins can also be used to aid wound

CC sumburn, to maintain organs before transplantation, for supporting cell

CC culture of primary tissues, to regenerate tissues, to dentify their

CC cognate ligands or binding partners, and in chemotaxis, and can be used

CC antibodies specific for a protein of the invention can be used in

CC alleviating symptoms associated with the disorders mentioned above, and

CC indiagnostic immunoassays e.g., radioimmunoassay or enzyme linked

CC indiagnostic immunoassays e.g., radioimmunoassay or enzyme linked
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAD05121-AAD05203 represent cDNAs corresponding to 24 human protein genes, and AAE01232-AAE01311 represent the proteins AAE01312-AAE01340 represent human secreted protein variants

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
The present invention describes an isolated peptide (I) consisting of an CC amino acid sequence selected from: (a) the amino acid sequence of a variant of the oestrogen receptor alpha (ESR-alpha) protein in AAG68251; CO r (b) a fragment comprising at least 10 contiguous amino acids of the protein in AAG68251. (I) has cytostatic, osteopathic, cardiant and vascribe activities, and can be used in gene therapy and vaccine production. (I) is useful for identifying an agent that binds to (I), by contacting (I) with an agent and assaying the contacted mixture to determine whether a complex is formed with the agent bound to the peptide. A polynucleotide (II), encoding (I), is useful in the complex is formed with the agent bound to the genetiated/modulated by an oestrogen receptor (ER). (II) is also useful in gene therapy for treating cancer, osteoporosis and cardiovascular classases. The human ESR-alpha gene is located on chromosome 6. The present sequence represents the human ESR-alpha gene, which is given in
                                                                                                                                                                                                                                                                                                                                                                                                                       22-FEB-2000;

The present invention describes primer sets for synthesising your comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination of a polynucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence complementary to a combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers sets can be used in antisense therapy and comparticularly full-length cDNAs. The primers are also useful for the graticularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB95893 represent human amino acid sequences; AAB92446 to AAH13632 represent oligonucleotides, all of which are used in the exemplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                    CC Sequences AAS44359-AAS44514 represent the SPINK5 gene, contigs and CC fragments of a SPINK5 clone, sequencing primers and PCR primers for SPINK5. SPINK5 encodes lympho-epithelial Kazal-type related inhibitor CC (LEKTI), a serine protease inhibitor. Susceptibility or predisposition to an atopic disease in a human subject can be detected by screening the genome for one or more polymorphic variants of SPINK5 gene and/or expression of a variant LEKTI protein in a tissue. Carrier status of a subject or development of Netherton's syndrome is diagnosed by screening for the presence of loss-of-function mutations in the SPINK5 gene. An expression vector compissing a nucleic acid encoding a serine protease inhibitor or its functional fragment can be used in screening for compounds with potential pharmacological activity by determining the serine protease activity of a protein previously identified as a ligand of the LEKTI protein. The atopic diseases include Netherton's Syndrome, as the status of a screen and hayfever.

                                                                                                                                                                                                                                                                                                                                      Sequences AAS44359-AAS44514 represent the SPINK5 gene, contigs and configments of a SPINK5 clone, sequencing primers and PCR primers for SPINK5. SPINK5 encodes lympho-epithelial Kazal-type related inhibitor (LEKTI), a serine protease inhibitor. Susceptibility or predisposition to an atopic disease in a human subject can be detected by screening the genome for one or more polymorphic variants of SPINK5 gene and/or expression of a variant LEKTI protein in a tissue. Carrier status of a subject or development of Netherton's syndrome is diagnosed by screening for the presence of loss-of-function mutations in the SPINK5 gene. An expression vector comprising a nucleic acid encoding a serine protease inhibitor or its functional fragment can be used in screening for compounds with potential pharmacological activity by determining the serine protease activity of a protein previously identified as a ligand of the LEKTI protein. The atopic diseases include Netherton's Syndrome, as the account of the contract of the serior protein.
                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                   Query Match

CC (AAI62971-AAI63793) and the encoded polypeptides (AAM42417-AAM42691)
CC collectively known as kidney antigens and the use of such kidney antigens
CC for detecting disorders of the kidney, especially kidney cancer and
CC kidney cancer metastases. The polynucleotides and proteins are also
CC e.g. by protein or gene therapy. The genes are isolated from a range
CC of human tissues disclosed in the specification. The nucleic acids,
CC proteins, antibodies and (ant)agonists are useful in the diagnosis,
CC treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer,
CC and other cancers of the adrenal gland, bone, bone marrow, breast,
CC gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders
CC e.g. Addison's disease, allergies, autoimmune haemolytic anaemia,
CC autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple
CC sclerosis, rheumatoid arthritis and ulcerative colitis;
CC (c) cardiovascular disorders such as myocardial ischaemias; (d) wound
CC healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy;
CC caractive infectious diseases such as viral, bacterial, fungal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match 42.9%;

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and ctreatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting CC the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent. CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK54950 and AAM82169 CC represent sevents used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                               01-DEC-2000
